'JICA Knowledge Co-Creation (KCC) Program' as a New Start

In the Development Cooperation Charter which is released from the Japanese Cabinet on February 2015, it is clearly pointed out that "In its development cooperation, Japan has maintained the spirit of jointly creating things that suit partner countries while respecting ownership, intentions and intrinsic characteristics of the country concerned based on a field-oriented approach through dialogue and collaboration. It has also maintained the approach of building reciprocal relationships with developing countries in which both sides learn from each other and grow and develop together.” We believe that this ‘Knowledge Co-Creation Program' will serve as a center of mutual learning process.
I. Concept

Background

"Farmers participation" for irrigation management is considered essential not only for efficient management and maintenance of irrigation facilities, but also for an effective use of water resources, increase in agricultural productivity as well as farmer's income generation, and even contributing to community development as a result.

In many developing countries, however, irrigation management is still fragile, mainly due to the lack of appropriate system, financial sources and necessary skills and knowledge for promoting farmers participation. In addition, irrigation rights are not conferred among farmers equally, thus causing socio-economic disparities within the communities.

In Japan, since Land Improvement Act was enacted in 1949, Land Improvement Districts (LIDs) have functioned as an irrigation management association. LIDs are associations which are composed of farmers and managed by the farmers themselves. They are expected to contribute to the sustainable irrigation management, encourage farmers' participation and ownership, and further promote community development.

This training program on “Participatory Irrigation Management System for Paddies” will be mainly conducted by the successful LIDs in Hokkaido, in order to transfer their experiences of irrigation management to the developing countries. Thus, it aims to contribute to improve/strengthen irrigation management systems in respective countries.

For what?

This program aims to improve and strengthen irrigation management system in participant’s countries.
※ Rice cultivation technique and irrigation technology are not main of scope of this program.

For whom?

How?

The participants are also expected to propose an “Action Plan” describing what he or she will do after their going back to home country with making the best use of the knowledge and ideas acquired and discussed in the program.

JICA and Capacity Development

The key concept underpinning JICA operations since its establishment in 1974 has been the conviction that “capacity development” is central to the socioeconomic development of any country, regardless of the specific operational scheme one may be undertaking, i.e. expert assignments, development projects, development study projects, training programs, JOCV programs, etc.

Within this wide range of programs, Training Programs have long occupied an important place in JICA operations. Conducted in Japan, they provide partner countries with opportunities to acquire practical knowledge accumulated in Japanese society. Participants dispatched by partner countries might find useful knowledge and re-create their own knowledge for enhancement of their own capacity or that of the organization and society to which they belong.

About 460 pre-organized programs cover a wide range of professional fields, ranging from education, health, infrastructure, energy, trade and finance, to agriculture, rural development, gender mainstreaming, and environmental protection. A variety of programs and are being customized to address the specific needs of different target organizations, such as policy-making organizations, service provision organizations, as well as research and academic institutions. Some programs are organized to target a certain group of countries with similar developmental challenges.

Japanese Development Experience

Japan was the first non-Western country to successfully modernize its society and industrialize its economy. At the core of this process, which started more than 140 years ago, was the “adopt and adapt” concept by which a wide range of appropriate skills and knowledge have been imported from developed countries; these skills and knowledge have been adapted and/or improved using local skills, knowledge and initiatives. They finally became internalized in Japanese society to suit its local needs and conditions.

From engineering technology to production management methods, most of the know-how that has enabled Japan to become what it is today has emanated from this “adoption and adaptation” process, which, of course, has been accompanied by countless failures and errors behind the success stories. We presume that such experiences, both successful and unsuccessful, will be useful to our partners who are trying to address the challenges currently faced by developing countries.

However, it is rather challenging to share with our partners this whole body of Japan’s developmental experience. This difficulty has to do, in part, with the challenge of explaining a body of “tacit knowledge,” a type of knowledge that cannot fully be expressed in words or numbers. Adding to this difficulty are the social and cultural systems of Japan that vastly differ from those of other Western industrialized countries, and hence still remain unfamiliar to many partner countries. Simply stated, coming to Japan might be one way of overcoming such a cultural gap.

JICA, therefore, would like to invite as many leaders of partner countries as possible to come and visit us, to mingle with the Japanese people, and witness the advantages as well as the disadvantages of Japanese systems, so that integration of their findings might help them reach their developmental objectives.
